2026.5 Model Year (B2)

## PEUGEOT PARTNER

**PEUGEOT PARTNER** features a renewed design, improved efficiency, the latest-generation connectivity and more sophisticated driving aids.

It also retains the robustness, versatility and driving dynamics that have made it such a success with professionals. Within the interior, the driving position has been extensively redesigned for greater comfort, ergonomics and practicality. The dashboard and steering wheel have also been redesigned, while the digital instrument cluster and the large central 10" touchscreen make the interface between driver and vehicle an enjoyable and efficient one.

\*Replacing the traditional lever, the Automatic transmission selection-mode dial/drive wheel is an innovative solution that is both elegant and intuitive. By simply twisting the dial, the following modes can be selected:

- Park, for when the vehicle is stationary and the wheels are locked
- Drive, for Automatic forward motion
- Neutral, for when the vehicle is stationary, wheels are free
- Reverse, for Automatic backward motion

For an extra experience of dynamism, the shift paddles for Automatic transmissions are located behind the steering wheel, offering drivers an extra level of control that is highly ergonomic and intuitive. The shift paddles function in the following way:

- To go up a gear, the driver must pull the right lever towards themselves
- To go down a gear, the driver must pull the left lever towards themselves

# PEUGEOT PARTNER | GLOSSARY OF TERMS

## PLATED WEIGHT

The maximum weight to which a vehicle or an axle may be loaded, determined either by the design of the components or by legislation. All commercial vehicles must carry a manufacturer's 'plate' showing the vehicle and axle gross 'plated weights'. It is an offence to drive a vehicle in a condition where any of these weights are exceeded.

## KERB WEIGHT

The Minimum Mass minus the driver's weight. When Kerb Weight used, driver weight is included within the Maximum Indicative Payload weight.

## MINIMUM MASS

Minimum Mass ('Mass in running order' on Certificate of Conformity and 'Mass in Service' on V5C form) is defined according to European Type Approval and include all fluids, tools and 90% fuel load. It is minimum mass for this variant and does not consider local specification/trim or deletable options (specific to Boxer). Weights are also subject to manufacturing tolerances (EU Legislation allows 5% tolerance).

## GROSS VEHICLE WEIGHT (GVW)

The total permissible weight of a vehicle including payload and passengers, as shown on the manufacturer's plate.

## GROSS COMBINATION WEIGHT (GCW)

The maximum permissible weight of a vehicle, including payload and passengers, combined with the total weight of any trailer it is towing. The maximum GCW weight limit is quoted on the vehicle plate and must not be exceeded.

## PAYLOAD

The total permissible weight that can be carried without exceeding the vehicle's plated weight. Payload do not include driver but do take into consideration specification/trim level:

Weights are also subject to manufacturing tolerances (EU Legislation allows 5% tolerance). Payload does not consider any additional options that a customer may order.

## ROOF LOADS

Roof load should not exceed 100kg including the weight of the roof rack/carrier.

## MAXIMUM TOWING WEIGHT

The maximum weight of any trailer and its load which may be towed within the limit of the vehicle's plated Gross Combination Weight (GCW). It is based on the ability of the vehicle – at full GCW – to restart on a 12% gradient, which is approximately 1 in 8.3, at sea level. At altitudes above 1500 metres, the engine output may drop with a corresponding reduction in towing capability. It is the operator's responsibility to ensure that the trailer noseweight does not cause the rear axle plated weight of the towing vehicle to be exceeded.

**Always fit PEUGEOT towing attachments and accessories available from your PEUGEOT Commercial Vehicle Retailer. They are designed specifically for PEUGEOT models and carry a 12-month warranty.**

## COMMERCIAL VEHICLE CATEGORIES

**Category M:** Passenger carriers

**Category N1:** Vehicles designed and constructed for the carriage of goods and having a maximum mass not exceeding 3.5 tonnes.
